PROFILE

Final-year CS student and full-stack builder who ships production-grade products, not just academic exercises. Every project I have built is live, deployed, and solves a real problem end to end. I use AI natively as part of how I develop, including agentic workflows, LLM APIs, RAG pipelines, and prompt engineering, and I have shipped a platform specifically designed to evaluate and benchmark AI agent outputs. Proficient in TypeScript, JavaScript, Python, React.js, Node.js, REST APIs, and PostgreSQL. Comfortable working autonomously, iterating fast, and learning whatever the problem demands. Looking for an environment where curiosity and shipping things that matter are the standard.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES8+), Python, C, Java (academic)

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, ShadCN UI, Responsive Design, Component Architecture

Backend and APIs: Node.js, Express.js, REST APIs, tRPC, Server Actions, JWT, Middleware, Error Handling, Microservices Basics

AI and Agentic Development: LLM APIs (Claude, OpenAI), agentic workflows, RAG pipelines, vector search, Prompt Engineering, structured output parsing, evaluation frameworks

Databases: PostgreSQL, MongoDB, MySQL, Supabase, Drizzle ORM, SQL and NoSQL, Schema Design, RLS policies

DevOps and Cloud: Git, GitHub, Docker basics, CI/CD basics, GitHub Actions, Vercel, Render, AWS basics, GCP basics, Unix/Linux

Tools: Postman, VS Code, Figma, Cursor IDE, Claude Code

PROJECTS

Caliber - AI Agent Evaluation Platform

Next.js, TypeScript, PostgreSQL, Supabase, Claude API, OpenAI API, RAG, vector search

- Built a production platform to benchmark and evaluate AI agent outputs at scale, using structured LLM prompt flows, RAG-style vector search, and guardrail logic that tests against edge cases and failure modes, not just happy paths.
- Designed the full evaluation framework from scratch: ground truth creation, structured prompt pipelines, output validation, metric tracking, and an analytics dashboard to surface insights.
- Integrated Claude and OpenAI APIs with structured output parsing and automated workflow execution, reducing evaluation cycles by 60-70% compared to manual testing.
- Engineered a scalable PostgreSQL schema with query optimization, reducing API latency by 20-25% on data-heavy operations.
- Built modular, reusable dashboard UI in React.js with TypeScript, increasing development velocity for new evaluation types by 40%.

The Swift Dictionary - Full-Stack Platform with Python Pipeline

Next.js 15, TypeScript, Python, PostgreSQL, Supabase, GPT API, custom domain

- Designed and shipped a complete full-stack product end to end: Python data pipeline for GPT-powered vocabulary extraction, PostgreSQL schema with full-text search and RLS, and a production Next.js frontend deployed to a live custom domain.
- Built 6 distinct application surfaces each with independent user flows: Dictionary, Explorer, Era Timeline, Word of the Day, Favorites, and Search, all within a unified design system.
- Implemented Supabase Auth with row-level security for an authenticated favorites system, dark and light theme support, and Framer Motion animations across the UI.
- Demonstrates ability to take a product from zero to live independently, handling every layer of the stack without waiting for direction.

Inkwell - Full-Stack CMS and Blogging Platform

Next.js App Router, tRPC, Drizzle ORM, TypeScript, Supabase Auth

- Built a fully type-safe backend using tRPC and Drizzle ORM on PostgreSQL, reducing API response times by approximately 43% and eliminating runtime type errors entirely.
- Implemented role-based access control, secure media upload pipeline via Supabase Storage, and a clean CMS workflow enabling 50% faster content publishing.
- Deployed with environment-based configuration on Vercel using a Git-based CI/CD-style release workflow.

The XO Store - Full-Stack E-Commerce Application

React.js, Node.js, Express.js, MongoDB, REST APIs, Stripe, Auth0, Cloudinary

- Built a complete REST API backend with Node.js and Express.js covering product catalogue, cart, checkout, and order management using MongoDB as the NoSQL data store.
- Integrated Stripe with real-time webhook handling achieving 100% successful test transaction rate, Auth0 authentication reducing login time by 25%, and Cloudinary image optimization improving load speed by approximately 45%.

F1 Race Winner Predictor - ML Pipeline

Python, scikit-learn, pandas, OpenF1 REST API

- Built an end-to-end Python ML pipeline covering data ingestion from a live REST API, cleaning and transformation with pandas, feature engineering, and model training with scikit-learn achieving approximately 82% prediction accuracy.

WORK EXPERIENCE

Frontend Web Development Intern | CODTECH IT Solutions Pvt. Ltd.

Mar 2025 - Apr 2025

- Contributed to a shared team codebase following Agile practices, participating in code reviews, iterative delivery cycles, and collaborative frontend development using React.js and TypeScript.

EDUCATION

B.E. in Computer Science Engineering

Dec 2022 - Jan 2026

SDM Institute of Technology, Ujire, Karnataka

12th / PUC - Science

Jul 2020 - Apr 2022

Poorna PU College, Dharwad, Karnataka

CERTIFICATIONS

- Full Stack Development Using React JS - CodeLab Systems
- The Complete Web Development Training Course - Infosys Springboard
- Data Structures and Algorithms using Java - Infosys Springboard
- Database and SQL - Infosys Springboard
- Blockchain in Depth - Infosys Springboard
